

10.4.

$$\mathbf{F} = (-y, x, 0)$$

$$\mathbf{F} \cdot d\mathbf{r} = ?$$

a)

$$x = R \cos t \quad dx = -R \sin t dt$$

$$\gamma : \quad y = R \sin t \quad dy = R \cos t dt \quad t : 0 \quad 2\pi$$
$$z = 1 \quad dz = 0$$

$$\mathbf{F} \cdot d\mathbf{r} = (-R \sin t, R \cos t, 0) \cdot (-R \sin t, R \cos t, 0) dt$$

$$\mathbf{F} \cdot d\mathbf{r} = R^2 dt$$

$$\mathbf{F} \cdot d\mathbf{r} = \int_{\gamma}^{2\pi} R^2 dt = 2\pi R^2$$

b)

$$\gamma : \mathbf{r} = (0,0,1) + t\{(1,1,1) - (0,0,1)\} = (t,t,1) \quad t : 0 \quad 1$$

$$\mathbf{F} \cdot d\mathbf{r} = (-t, t, 0) \cdot (1, 1, 0) dt = 0$$

$$\mathbf{F} \cdot d\mathbf{r} = 0$$

γ

SVAR: Kurvintegralen är lika med a) $2\pi R^2$ b) 0.
