## Homework number 4 to SF2736, fall 2014.

Please, deliver this homework at latest on Monday, December 8, 2014. Provide both your name and your e-mail address with your solutions.

The homework must be delivered individually, and, in general, just handwritten notes are accepted. You are allowed to discuss the problems with your classmates, but you are not allowed to deliver a copy of the solution of another student.

1. $(0.2 \mathrm{p})$ Consider the symmetrical group $\mathcal{S}_{10}$ of permutations of the elements in the set $\{1,2, \ldots, 10\}$. For which integers $k$ are there elements $\varphi$ in $\mathcal{S}_{10}$ of order $k$.
2. ( 0.2 p ) Let $\varphi$ and $\psi$ denote the following elements in the symmetrical group $\mathcal{S}_{6}$ :

$$
\varphi=\left(\begin{array}{lll}
1 & 2 & 4
\end{array}\right)\left(3 \begin{array}{ll}
3
\end{array}\right)\left(\begin{array}{ll}
2 & 6
\end{array}\right), \quad \psi=\left(\begin{array}{llll}
1 & 5 & 3 & 4
\end{array}\right)\left(\begin{array}{lll}
3 & 5 & 2
\end{array}\right)
$$

Is there any element $\gamma$ in $\mathcal{S}_{6}$ such that

$$
\varphi \gamma \varphi \gamma \varphi=\psi
$$

3. (0.3p) Find two non-Abelian groups of size 12 that are not isomorphic.
4. ( 0.3 p ) The set $U\left(\mathbb{Z}_{24}\right)$ of multiplicatively invertible elements in $\mathbb{Z}_{24}$ constitutes an Abelian group. This group is isomorphic to a direct product $S$ of cyclic groups. Find this direct product $S$.
