Visa:

$$\int_C P dx + Q dy \quad \square \quad LM$$

$\square L$ = Längden av \square .

$\square M$ = max av $\sqrt{P^2 + Q^2}$ då $(x, y) \in \square$.

$$\square : \begin{cases} x = x(t) \\ y = y(t) \end{cases} \quad t : a \square b$$

$$\left| \int P dx + Q dy \right| = \left| \int (P, Q) \cdot (dx, dy) \right| = \int (P, Q) \cdot (dx, dy)$$

$$\int (P, Q) \cdot (dx, dy) = \int \sqrt{P^2 + Q^2} | (dx, dy) | = \int M | (dx, dy) |$$

$$\int | (dx, dy) | = \int \sqrt{(dx)^2 + (dy)^2} = \int_a^b \sqrt{(\dot{x})^2 + (\dot{y})^2} dt = L$$

$$\left| \int P dx + Q dy \right| = LM$$
